

WOOD QUALITY MANUAL

ceresdisplay.com

As part of CeresDisplay's new **"Green Ceres 2025"** project, we have reviewed our wood standards to align with this sustainable approach.

- We will continue using European beechwood as before, ensuring that all wood used in our products is traceable.
- Our entire wood supply chain will be FSC-certified (Forest Stewardship Council) to prevent deforestation at the source.
- We aim to achieve FSC certification by the end of 2024.
- Additionally, our quality team will obtain EUDR certification this year.
- These initiatives are included in our 2024 Quality Plan, which is audited periodically by third parties such as Sedex, EcoVadis, ISO 9001, ISO 14001, and ISO 45001.
- We have also begun sourcing our wood from Europe's largest wood manufacturer to support our sustainable goals.
- Our wood manufacturing process is controlled by SFC, ensuring ethical standards are met, including no discrimination, no child labor, no labor abuse, and no environmental harm.
- The quality of our wood is exceptional—well-dried, highly durable, and resilient to shocks.
- We've redesigned nearly all of our products for tool-free assembly.
- We have also focused on reducing packaging material by designing modular products, which has halved our packaging consumption.
- For our wood products, we offer a design support center where we work closely with customers to meet their specific needs and preferences. Our experienced team creates product designs and provides samples, either physical or 3D, for customer review.
